

Anti-Contact Non-Offending Pedophilia?

by Miles Mathis

October 26, 2025

My opinion as usual, and all photos used are fair use

I tripped across [this article](#) today at ZeroHedge called

'Gapazoid' The Suicidal Pedo Who Rushed Wikipedia Conference Stage With Gun Was Ex-Editor

That's him above, Connor Weston, 27, waving his self-created pedophile flag, as you do.

And there he is after being “subdued”, smiling faintly at the absurdity of it all. Do you think it might be a faked event? It is hard to make heads or tails of this story, but the point seems to be to plant the idea of an “anti-contact non-offending pedophile” in your head. It makes no sense, so I looked it up. That is someone who has never improperly touched a child, doesn't want to improperly touch a child, and doesn't look at child porn, but nonetheless publicly “identifies” as a pedophile. So kind of like someone who has never been charged with murder, never murdered, doesn't want to murder, and has no gun, identifying as a murderer.

What sort of person would do that? Can you say “an agent pushing Operation Chaos forward one more step?” Don't believe me? Well, do what I did and keep searching on it. The next thing that came up for me was [this publication at academia.edu](#):

The blog of Ethan Edwards: a case study on anti-contact non-offending paedophilia. How an individual identifies as a "celibate paedophile" and lives with his sexual attraction?

Alessio Udovisi

2023, Zenodo ([CERN European Organization for Nuclear Research](#))

<https://doi.org/10.5281/ZENODO.8101951>

You may want to ask yourself why some person at CERN, the center for Nuclear Research, would be publishing a paper on fake pedophiles. Well, here is a blow-up of Alessio Udovisi's picture to start with:

I also note he can't write, since he has improperly used a question mark in his title. Authors normally list their academic affiliation, but it only says Zenodo there. What is Zenodo? It is CERN's open repository for research papers. Papers are issued a DOI and become digitally citeable. But that makes us repeat the question: why would CERN be in the business of promoting this sort of fake research? My readers already know. It is because all these places are Phoenician Navy fronts, promoting a massively faked world, not only in the sciences but in all fields. Everything nuclear is a fraud and so is this pedophilia stuff. It is promoted simply to create more fear and division and to split the sexes.

Just for fun I continued to search on this Udovisi person. Other than this one paper, he has almost no presence online. He used to have a LinkedIn page, but it is now 404. This is the picture he has posted at FundMyTravel.com

In 2016 he was seeking £1400 for travel to Bali as a mental health volunteer, but got only a quarter of that from 13 people, half of it from one person named Giada. Hmm, Bali, eh? Yes, Bali is known for its mental health epidemic. Guess he will have to travel to the Seychelles or St. Bart's next.

[**Addendum November 7, 2025:** Just heard from Udovisi, who accused me of defaming him and using photos illegally. Ridiculous, since there is no defamation here and photo use is fair use, since this is opinion and review of the news. He has been busy scrubbing himself from the internet since this came out, since he removed that pic of him above, and [his listing at academia.edu is also gone](#). Did academia retract it or did Udovisi delete it himself? I don't know. His figshare page is empty. He tells me the listing at CERN was just an error, though the article is still up at Zenodo. The article is also still up at Psychreg.org if you want to read it and come to your own conclusions.]

On this groundbreaking topic, academia.edu also recommended [a 1983 paper](#) by Dr. Glenn Wilson, who also has no affiliation and only one follower in 42 years. This paper was based on a

a lifestyle questionnaire completed by 77 members of the Paedophile Information Exchange (PIE), a self-help club for men who are sexually attracted to children.

So another gathering of agents and spooks. Who else would join such a club and fill out such a questionnaire?

But how exactly does this false promotion of pedophilia help the governors? I have hit this before: they want to split everyone from everyone, not only men from women, gays from straights, blacks from whites, and democrats from republicans, but **adults from children**. They would prefer we not touch one another at all, which was what the Covid restrictions were about as well. They want you living in a plastic bubble of fear, since you are easier to control that way. Also a much better consumer, since you need a million compensatory products. In this matter of children, they want you too afraid to interact with children or touch them, lest someone think you are a pedophile. This ensures that children will never be touched or played with, guaranteeing our next generation of frigid non-binary gray people.

If you have any inclination to play with children, they want you labeling yourself a possible pedophile and rushing to the doctor or psychiatrist for therapy and drugs. The next step is to do the same thing with dogs and cats, and they have already started it on Youtube and other places, telling people that animals don't like to be picked up and cuddled. Next they will create animal abusers: people who perversely force themselves on puppies and kittens by kissing them and hugging them. Your neighbors will report you to the police for petting your cat and Cat Protective Services will show up and fine you or forcibly remove all abused cats from your premises.

You may think I am joking but I'm not. It sounds absurd but it is no more absurd than the many things you have come to accept in the past 50 years as normal.
